Feedback Analysis

The Feedback Analysis Committee of the institution designs and collects feedback from its stakeholders to monitor and evaluate its performance quality on curriculum and curriculum related issues. The feedback forms were collected online in the end of academic section from students, Parents, Alumni and Parents on several aspects of curriculum and its learning related issues in terms of quality, competence, skills and professionalism. Methodology:

- 1) The Feedback on curriculum is collected from students by circulating the Feedback Forms. It is collected by feedback committee and submitted to IQAC to deliberate on various suggestions made by the stake holders
- 2) The feedback committee holds meeting at the end of the academic year to discuss the various suggestions and prepare action taken report.
- 3) The action taken report will be circulated among the staff members through the IQAC and a copy of the same report is submitted to IQAC

Energy Audit Report**Introduction:**

Our nation has potential in intelligence but was on back foot in terms of quantity and quality of education. Today our nation is marching towards developed nation in numerous fields. Among these fields, we have to meet energy demand and to produce clean sustainable energy. Our world is now in energy crisis, we as world facing energy shortage, in future it may increase. This causes lack energy for institutional work. Thus, we need institutional management in saving electricity, using it in smart way and producing electricity effectively for socio-economical purpose.

For energy, our nation is entirely depending upon fossil fuels. India has huge potential in producing energy in renewable sector. In India, 35% electrical energy is used by industrial sector, 28% by domestic sector, 21% agriculture sector, 9% Commercial sector and rest of electricity is used by common public applications. Energy conservation is the solution to the energy crisis, meaning reduction in energy consumption without compromising quality and quantity of work. Energy Conserved is the start of energy management, it leads to adequate rating of equipment's, replacing it with efficient (high rating) and improving habits to save more energy. It will vital to being self-sufficient organization in terms electricity.

In the present study, energy audit has been done. For these audit laboratories, instruments, air conditioners, fans, lights, fans, computers and its peripheral devices are considered in the study. The study also include total economic budget of college for the electricity. We have calculated exact number

Green Audit Report

1. Solid Waste Audit

Introduction:

Shri Shivaji Arts, Commerce and Science College, Motala is an environment-friendly educational institute, and for any Environment-friendly institute, Solid Waste Audit is considered as a crucial part. In educational institutes like Shri Shivaji College, Paper, chalk, Polythene, Glass, and Biomass are the major constituents for solid waste production. Although Paper, Chalk, and Biomass wastes are considered Bio-degradable wastes, their production is directly or indirectly depends on the environment and their inappropriate management can raise environmental issues e.g. this waste can alter the water quality of a stream if it goes into the local water stream. Solid waste auditing gives an actual idea about solid waste generations in the campus and management strategies followed by the college. In this report, studies were carried out to analyze the solid waste profile of the college and corresponding waste management techniques.

Aims and objectives:

- i. To calculate total solid waste generation on the campus.
- ii. To classify solid waste according to categories and places.
- iii. To analyze the obtained data and find key solid waste generation places.
- iv. To discuss present-day Waste-Management Strategy of the campus
- v. To issue appropriate recommendations considering different parameters like solid waste generation, management strategies, etc.

Methodology:**1. Data collection:**

While collecting data, solid wastes like papers, polythene, glass, chalks, etc. are stored separately in a dustbin for a week for each mentioned place and weighed on a balance at end of the week. Solid wastes like kitchen and food waste are weighed each day and disposed of, the data of all seven days are added and represented separately.

2. Data analysis:

The obtained data is represented in tables and analyzed in excel by pie diagrams and bar diagrams.

3. Comment on Recommendations:

The comments have been made considering the number of stakeholders, the amount of total waste generation, the present-day waste disposal method, and research has been done to recommend more efficient methods of solid waste management.

Conclusion:

Garden waste (biomass), Paper, and hard paper waste are the major constituents of solid waste generation on the campus. Hard Plastic, and Chalk waste are the minor components of solid waste generation. After detailed studies, we can conclude that the campus has a negligible amount of polythene generation.

Discussion:

Shri Shivaji Arts, Commerce and Science College, Motala a well-known institute in Buldhana district. The institute is famous for conducting curriculum-based activities and delivering social, moral, and ethical values to its stakeholders. As an environment concerned institute, college knows Solid waste, the most common type of waste in an educational institute, should be managed properly. So college has built two the Vermi-Compost Manure Plants of 12ft L x 4 ft W x 2 ft H each. The garden waste which is the major component of solid waste generation and other kind of organic waste is collected, segregated, and transferred to the Vermi-Compost plant.

The less polythene generation in the campus is a result of timely awareness programs conducted on the campus.

Paper waste ranks second in the total solid waste generation index of the campus. Key sources for paper waste generation are the office, and science departments. The potential paper waste source in any educational institute is library so keeping this in mind and to reduce paper waste generation in library Shri Shivaji Arts, Science and Commerce College, Motala has adopted an advance library management software.

2. Water Audit

Introduction:

Water is the prime important constituent of life. The quality of water and availability of water are the factors that define the health of the system. In education institutes having science faculty, PG departments, and research center, the amount of chemical mixed waste-water generation is considerable. In the institute like Shri Shivaji Arts, Science and Commerce College, Motala which is having around 1073 stakeholders, it is necessary to build appropriate water storage systems, check on the water demand, ensure efficient use of water and develop appropriate waste-water management system. The campus of Shri Shivaji College of Arts, Science and Commerce, Motala, holds several trees, and a toilet which are key sink areas for non-potable water. Whereas water purifiers in the campus, is major potable water storage systems. All the detailed study regarding water system of the campus is reported in this report.

Aims and objectives:

- To describe the water storage system of the campus in great detail.
- To estimate the total potable and non-potable water demand of the campus.
- To compare data regarding water storage systems and estimated water demand.
- To recommend specific techniques to use water efficiently.

Methodology:**1. Data Collection****i. Water storage system:**

The water storage system of the college is documented by organizing broad interviews with the college staff and spot inspection by audit experts.

ii. Potable and non-potable water demand:

For estimating the water demand of the campus, surveys are carried among all the stakeholders and staff by the digital way (Google forms), the collected data is then analyzed and represented in Microsoft Excel.

iii. Wastewater management system:

The data on the wastewater management system is collected by visiting the places on the campus by audit experts.

2. Data Analysis

The collected data from digital surveys, interviews, and spot visits is then analyzed by MS-Excel and represented in suitable diagrams.

3. Comments and Recommendations

The comments and recommendations have been made considering the number of stakeholders, the total water demand, water storage system, wastewater generation, and wastewater management system.

3. Noise Audit

Introduction:

Shri Shivaji Arts, Commerce and Science College, Motala, believes in student's utmost development by providing quality education. The institute takes all moral, ethical, social responsibilities that will enhance students' focus in all aspects of the course curriculum. For the same, the institute has taken in its policy that, the institute will have silent but happening premises which will lead to better growth of students. This report includes the data, calculations, analysis, and discussion about the noise index of the campus and corresponding standards set by government agencies.

Aims and Objectives:

1. To analyze noise level in campus considering road traffic parameters, different noise indices, and altitudinal response.
2. Recommend healthy practices to minimize or maintain noise levels.

Green Audit Report

Methodology:

- 1. Review of literature and Government standards:** This audit procedure included a review of government policies related to noise standards in educational institutes.
- 2. Data Collection:** The data regarding noise is collected from different locations and times. Noise Meter is used for the collection of data in decibels.
- 3. Result and Conclusion:** The result and conclusion are drawn after the detailed analysis of the literature reviewed and the data collected.

4.	Classrooms	10	10:00 am to 04:00 pm	40.6

Green Audit Report

Conclusion:

The key places for noise generation are Classroom and office premises, which shows the highest (Average for the location) i.e. 40.6 dB and 40.2 dB and Library has the lowest (Average for the location) noise generation i.e. approximately near to 24.6 dB.

Discussion:

The standards set by CPCB (Central Pollution Control Board) for silent zones include noise levels of 55 dB in the day-time and 45 dB in the night-time. The core study areas of the college premises are meeting the standards set by CPCB for the educational institute and so the college can be considered as a silent zone as it meets the standards set by CPCB. The every corner of the college is free of external noise as it is surrounded by farmland from 3 sides and a rarely busy road on remaining i.e. front side.

The highest level of noise in the campus is at the office and classroom premises, which is due to gathering of people at that location for official chores as well as daily routine. The lowest noise level in the campus is near the library which is due to the best management of library culture and architectural planning of the infrastructure and dense vegetation in the campus.

Recommendations:

Following recommendations are made to monitor the noise level in campus:

1. It is recommended to plant more trees near the boundary of the college campus, which will reset the noise level caused by vehicular traffic on the adjoining road.

The institute is trying its best to maintain the biodiversity on the campus as well as off-campus. Knowing the need for percolation of scientific knowledge in the society, the Botany department has carried various projects to collect taxonomic information about the plants belonging to nearby areas, college as also donated tree sapling to the passed student of the college on the occasion of convocation and as a part of social responsibility around 500 plants of different species are planted by the

college in the surrounding village under the Biological Society established by the College, images and news cuttings of the same are attached in the annexure. The college has also installed the honey bee boxes in the campus which plays essential part in honey bee conservation.

By considering need of mass plantation and less germination of the seeds of wild plants, the college has conducted a workshop on 'Seedball Making' which provided hands-on training to its stakeholder and passed a good message of conservation into the society.

Recommendations:

Following recommendations are issued after studying the collected data:

1. As the campus is rich in floristic diversity, efforts should be taken for raising seed banks in the campus, which can be useful in conserving biodiversity.
2. The plants from native flora should be preferred for further cultivational activities on the campus.

(57) Abstract :
Effective diagnosis of machine is predicted by real time modular monitoring system whose main focus is to forecast life span of the component /tool with high flexible capability of prediction. The proposed invention presents a two stage model based on back propagation neural network model of artificial intelligence, for real time prediction which monitors and validates life span of the tool. Parameters such as temperature, current, vibration, acceleration and cutting forces are utilized for forecasting tool wear from the analytic model. Process efficiency increases with effective assessment of tool wear rate such that tool replacement avoids any catastrophic event. Tool wear is predicted during turning of hardened steel by checking multilayer perception using artificial neural networks. Monitoring and prediction system of tool lifespan enhances the productivity of manufacturing unit based on the analysis of artificial neural networks.
